

Suzi Gardner Photography is committed to decreasing our carbon footprint both in studio and personal life;

- We aim to help others to make more sustainable choices by making it easier for them understand and find better choices – by research and links on website
- We aim to generally raise awareness in a positive way
- We aim to hold the government and big companies responsible to make changes within their companies so it filters down again making it easier for public to make better choices, using our buying power, writing letters etc.

Above is our current WWF carbon footprint, showing 6.4 tonnes per year. With the advice offered by the WWF and my own strategy listed within my policy, my target carbon reduction for the next 12 months is to reduce this by 1 tonne in the next 12 months

My green and sustainability 12 month plan

- Add more water butts for reusing water for plants in studio and outside garden
- Sola panelling reinstalled so we produce nearer 100% of our own energy
- Buy: Eat more local and seasonal, Less packaging, add more rigor to my Eco Friendly buying process
- Look at Smart tech for lighting and heating automation and usage
- Add more helpful links on my website to share best practise
- Within 8 months I want to have encouraged all of my product suppliers to full understand their carbon impact and product sustainability
- Charity – We will resume our monthly donation to Green peace

Long term

- Design a domestic grey water harvesting system
- Sensor lights in studio and home
- Being more involved in raising the profile of sustainability
- Start a one shop range of Eco friendly baby goods
